When the multi-million dollar 1-15 bridge over the Colorado River in Yuma, Arizona collapsed last week, killing one person, it unleashed a public outcry. The first big decision that will come out of this tragedy is on whether this bridge should be replaced with a similar span. There are many questions to be answered. Here are two that I think are worth answering now. One: What will be the cost of replacing this bridge? Let's start with the basics. If we are replacing this bridge, we need to know exactly what the cost will be. The Federal Highway Administration defines a number of key terms: Build Cost (BAC) The cost to construct a highway. The cost to construct a highway. Permanent (BOR) The estimated cost to maintain a highway after construction. The estimated cost to maintain a highway after construction. Bridge value (BER) The dollar value of the roadway, ramp and land that a bridge represents to local communities. The dollar value of the roadway, ramp and land that a bridge represents to local communities. Replacement value (RER) The cost to replace a similar roadway. The cost to replace a similar roadway. Infrastructure value (IVR) The total \$2157476af
